Signature of **thesis** adviser:
Signature of **sponsor**:
Signature of **student**:

*Select optional courses in agreement with your master's thesis adviser, your sponsor (where applicable), and the vice-president of the Section. Selected courses must relate to the master in prehistoric archaeology.

Geneva, (date)

ANNEX TO THE BYLAWS OF THE MASTER IN PREHISTORIC ARCHAEOLOGY

Registration:

Registering for the master's degree is only possible after having identified a master's thesis adviser.

The master's thesis adviser must be a professor or MER of the Section of Biology. Those with the title CC and CE can be authorized by the president of the Section to supervise or to sponsor a master's thesis, provided they have a doctoral degree.

Doing the master's thesis in a group outside of the Section of biology is possible with the authorization of the presidency of the Section, and with the agreement of a sponsor who must be a professor or MER of the Section of biology (or CC or CE as indicated above).

The sponsor of the Section is responsible for ensuring that the academic environment of the host group is appropriate for a master's thesis, and for the final evaluation of the thesis. The potential sponsor or his/her department can request a written project description before accepting the sponsorship.

The registration form for the master's thesis must reach the "Secrétariat des étudiants" of the Section of biology with all signatures by the beginning of the fall term at the latest.

The registration form is checked by the "Secrétariat des étudiants" of the Section and then signed by the presidency of the Section. Copies will be returned to the student including one for the thesis adviser and/or sponsor.

Goals of the master's thesis:

- To answer scientific a question related to prehistoric archaeology.
- To become familiar with the practical and theoretical aspects of the scientific process.
- To acquire a wide range of experimental skills involving a variety of techniques.
- To learn to present scientific results in group seminars and in written form (e.g. master's thesis).

Time investment for master's thesis:

The master's thesis is worth 60 ECTS. This corresponds to 45 weeks of full-time work (without any vacation).

Writing the master's thesis:

See directives on the web page of the Section of biology (<http://www.unige.ch/sciences/biologie>).

Submitting the master's thesis:

Once the master's thesis has been accepted by the thesis adviser, the student must submit a copy to the "Secrétariat des étudiants" of the Section of biology, and the requested number of copies to the thesis adviser and, if applicable, the sponsor according to the rules of the corresponding department.

The master's thesis is graded by two examiners, including the thesis adviser. When the master's thesis has been carried out in a group outside of the Section of biology, the sponsor acts as the second examiner. The grade is submitted in writing with the two signatures to the "Secrétariat des étudiants" of the Section of biology. The grade can also be given by the faculty of the corresponding department.
